Overview of Activated Liquid Zeolite (ALZ)

The information contained herein was transcribed from a recorded talk of Dr. Prociuk

My career as a doctor started off pretty traditionally. I was board certified in internal medicine in 1985, and I worked in a teaching hospital initially, affiliated with the University of Pennsylvania. I've been an assistant director of an intensive care unit and was also involved in emergency medicine for a number of years.

Limitations of traditional medicine were very apparent to me from the very beginning of medical school, actually. Fortunately, as I look back, I never really accepted the drug culture was carefully molded into us as medical students. I always had an open ear and an open eye for something else. As I continued to practice as a regular doctor, my dissatisfaction with traditional methods progressively increased.

I was continually faced with the question, "Doctor, what can you do to help me get rid of my condition instead of giving me something that just temporarily relieves the symptoms?" After years of study, long hours, and hard work, I simply didn't have an answer to those questions. That made me extremely frustrated, and at one point, I was ready to throw in the towel and take up book binding or something else for a living.

Right at that time, I met an elderly gentleman who was a doctor and practicing homeopath, and a long story short, I took on his offer to practice homeopathy. He gave me his practice in 1992. Through the 90's, I practiced very happily and with a great deal of satisfaction as a classical homeopath.

During the 90's, I encountered lots of kids with various developmental challenges while on homeopathy, and it was clear to me there was a level of toxicity involved with their condition and more physical methods of treatment were required. Homeopathy, as many of you may know, is really a form of energy medicine similar to acupuncture, and that kind of treatment alone just didn't seem to cut the mustard.

So I attended some conference that addressed problems of toxicity in children and learned some of the methods to deal with that, primarily through nutrition and dietary changes and chelation. I started implementing those methods in my practice in the 90's and early 2000.

INTRODUCTION TO ALZ

My introduction to ALZ came through my partner's mother who was diagnosed with a very dense uterine cancer in late 2005. To make a long story short, after about two months on ALZ, there was no clinical evidence that she had any cancer left. That kind of exposure is an eye popper. You just have to absolutely stop in your tracks and look at what this product is. Literally, there was nothing in my previous experience that would have remotely resembled that kind of dramatic result.

As I studied this very remarkable product further, I understood it to be a tremendously powerful agent of detoxification and I immediately recognized that it had a wonderful application in the autism world. Since late and mid December, I've been using it with those

patients with a wonderful degree of success and without any of the problems associated with traditional chelation.

Also, a pretty wide range of other problems is very much helped by ALZ in that it removes the toxicity that promotes the establishment of a wide number of diseases. The last form of traditional chelation that I used was transdermal DMPS. Sometimes you have to do that for several months before you really start to see anything, either in terms of the detoxification reaction or clinical response. Not in every child, but the protocol generally calls for a prolonged chelation up to two years with multiple testing in between to make sure you are not depleting minerals and also from time to time checking liver function because DMPS does have a low risk of hepatic toxicity.

None of those complications exist with ALZ. It doesn't have any depletion issues. It doesn't have any issue with liver toxicity. Also, the propensity for other chelators to aggravate underlying yeast overgrowth which plagues this population of patients also doesn't exist with ALZ.

ALZ actually has fungicidal and fungistatic properties of its own. Very importantly, traditional chelators have a selected target. They are charge specific, so they will only have an affinity for heavy metals that have the corresponding charge. That just makes ALZ a vastly superior choice in my opinion. As a clinician, I can't really ask for anything better.

Fundamental Change Coming

From a broad bird's eye perspective, this product is of such an extraordinary nature, that I truly believe that it will be a catalyst that will change the entire paradigm of clinical medicine. Currently, we are locked into a disease classification kind of paradigm. In fact, it's kind of arbitrary and man-made and probably doesn't have much relationship to the real world.

The realities of disease are there as genetic susceptibilities or predisposition and there are environmental stresses, including physical toxins, that we are exposed to. It is the combination of these susceptibilities and stressors that produce the various conditions we call diseases.

The whole paradigm of clinical medicine, I believe, is going to shift more to understanding, what we can do to remove the stressors, because that will allow the healing capacity of the body to become liberated to do what it knows how to do. We have in our hands a product which is absolutely remarkable in its power to do that. The opportunity to participate in this whole shift is truly extraordinary and is certainly something I want to be part of.

Epidemic of childhood problems linked to increasingly toxic world

We have the sickest generation of children in this current generation than ever before in American history. One third of our children, now, approximately are on some kind of chronic medication. All you have to do as adults is ask yourself, how many children in your class when you were in school, in general, were ill – possibly two in the whole school. Now there are three or four in every class. The list of diseases goes on and on.

Clearly, we are facing an epidemic, not only in the autism spectrum, but in the whole health picture of this generation of children that has taken a marked and a very scary turn for the worse.

Whenever you are faced with that kind of picture, it is clearly some kind of environmental toxicity. The human genetic makeup will never deteriorate that quickly spontaneously, because if it did, human beings would have been wiped out eons ago.

The question then is: what has done this? We are seeing the same picture in all parts of the country. The statistics are roughly the same, so it's something the children are being uniformly exposed to, and in my opinion, that something is the lunatic vaccine schedule the children are now receiving.
